

# FIRST IN THE WORLD FIGHTER WITH SPECTRUM ANALYZER EMBEDDED

TM

Just what the doctor ordered!

*combat :)*

## F16 ~~SAT & TERRESTRIAL COMBO RECEIVER~~

The receiver is called **F16**, same as **well-known jet fighter**. Coincidence? **Just one more receiver, same functions like others?..** - somebody may ask. The answer is easy. **Just try it once, and see for yourself.**

- Rapid-fire guns (high-speed card-reader for faster encrypted channel zapping time)
- Full ammunition (Combo SAT+TERRESTRIAL receiver for reception of all the channels, including HD)
- Extended Telemetry Systems:**

**NEW!**

**External temperature meter function**

**Full-time connection to the Internet by Ethernet via LAN**

- Black Box: HD PVR-ready (via external USB and eSATA) for recording the programs; time-shift and trick-mode
- Easy-to-fly: The PVR-recordings of the F16 – can be played on the PC without any conversion
- Effective armor: equipped with full protection against short-circuit of the LNB cable (really rare function nowadays)

**RADAR: pro-grade SPECTRUM ANALYZER embedded**

**More TOP SECRET functions to follow soon!** The copy-cats are already working hard to copy our unique functions. So we cannot announce too much within this flyer, sorry.

SO, STAY TUNED TO [WWW.DR-HD.COM](http://WWW.DR-HD.COM) FOR NEW UPDATES!

\* much more price-effective than ANY fighter jet    \*\* only peaceful use intended!    \*\*\* main idea of that set-top box is not super-powers: it is fun to use – that's why people like it and talk about

RECEIVER HAS SOMETHING FOR:

1. **Self-installers (DIY)** like it, because: easy and comfortable to install, also saves \$\$\$ for installation charge!
2. **Tech-geeks and satellite enthusiasts** choose it, because it has much more professional functions than regular set-top box.
3. **Professional installers** advise it, because: new USB-profile functions save work time and money, it is possible to make more installations during one day.

**And two other reasons are: IT IS FUN TO USE and GOOD PICTURE.**

Disclaimer: the picture(s) may not be an actual representation(s) of the product. Specifications are subject to change without notice.

## User functions

- **D.I.Y. dish installation: professional grade SPECTRUM ANALYZER embedded**
- **FFBS™ (Fully Functional Beep-Search) allows you align/adjust a dish, even alone, by sound coming from your TV**
- 2 tuners for reception of both satellite and terrestrial TV
- Quality HDTV picture: watch both SDTV and HDTV, up to 1080i
- UPSCALE function allows convert SD channels to resolutions up to 1920\*1080
- PVR ready: recording and Timeshift functions (with external HDD, USB or SATA)
- Blind scan of any satellite and frequencies (including HD, ideal for feed-hunters)
- No need to buy CAM for most original cards. Possible to use up to 3-4 smartcards (using CAMs) if required
- Encrypted channel zapping time is much better for Via-providers and Ir-providers: card works in Turbo Mode: see and experience for yourself;
- Ethernet port for connection to LAN and to remote servers via Internet for software upgrades, and much more
- Adjustable speed of RS-232 connection
- Satellite input is short-circuit-proof
- Supports 576i, 576p, 720p, 1080i
- PrPbY (CrCbY) component signal output for best picture quality
- S-Video output
- USB 2.0 port for firmware updates, PVR, settings up/download, etc.
- Media player features: playback of movies, music and pictures from external USB drive
- DiSEqC 1.1 support for connection of up to 16 dishes
- DiSEqC 1.2 and USALS functions for motorized dish control
- Subtitles and teletext
- Parental control
- and all the other standard features already included

## FIRST IN THE WORLD RECEIVER WITH SPECTRUM ANALYZER

That is the first function in the line, others to follow!

Please check our web-site and contact us, because we have MUCH MORE up our sleeve.

When we introduced our Spectrum Analyzer feature – we knew that it will be a hit in the markets. And we were right.

Of course, our competitors (in China and in Germany) had started copying our functions. And that was obvious thing, too. The copy-cats in Germany and China don't have R&D to do what we can do. But the main thing is: they don't have IMAGINATION for all the new features. Of course, they were able to copy-cat our exclusive Spectrum Analyzer function. No big deal. Soon, we are releasing the Spectrum Analyzer PRO software for the receiver. It will have MUCH more.

Are they able to copy it? Maybe. But by that time, we will release much better software. And by the way, it is coming soon! It is just too early to say too loud (at the time of writing).

But you can be sure that something is on the way. We will make public release as soon as we can (patent work, etc.).

No matter what the copy-cats do, we will be three steps ahead.

Why is that? Because we are not a typical company. We are not interested in red tape. We are small, and effective. We have fun doing what we do. And we always look from the customer side - because we are customers of our own equipment: set-top boxes, media-players, etc. that each of us will LOVE TO USE AT HOME. (That is how the Spectrum Analyzer and FFBS™ (Fully-Functional Beep-Search) function was born. We became tired of waiting for installers to arrive to fix what they have installed, and we didn't want to pay them for not-so-well-done work. Also, there is need for fast-installation at summer houses and campings. And because of FFBS it is easy to re-align already installed dish, even alone. Besides, all of this is BIG FUN to use. That's how new functions are born.

Many more to follow! And they will change the way you percept your set-top box. We will all see.

## Let's have fun together!
